Akuvox FacePro Face Recognition Management Software

Akuvox FacePro face recognition management software

Akuvox FacePro software provides easy management of face recognition data for door intercom devices such as R29 and X916 models.

The Akuvox FacePro is a PC software App which allows remote management of face image data for the face recognition authentication function of certain Akuvox door intercom devices.

FacePro is ideal as a 'central point' for data management using a laptop or PC webcam to photograph users and add their face scan and create an account on a single or multiple Akuvox devices.

- **Face Recognition Data Management**

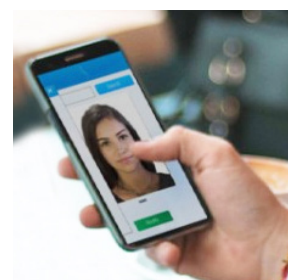

Akuvox FacePro provides remote management of image and data for facial recognition user accounts.

- **Image management from webcam**

FacePro allows new user accounts to be set up using a photograph directly from a PC / laptop's standard webcam.

- **Mass data importing**

FacePro allows multiple images to be uploaded to create multiple user accounts en mass.

Bringing technology to life.
