

WHAT IS A CONTACTLESS PATHWAY?

PUBLIC TRANSPORT CONTACTLESS PAYMENT

Contactless payment for public transport is now the preferred option by most providers and is made as easy and accessible as possible. Oyster Cards, book-in-advance phone apps and Apple Pay / Google Pay from your phone or smart watch ensure a significant reduction in cash handling.

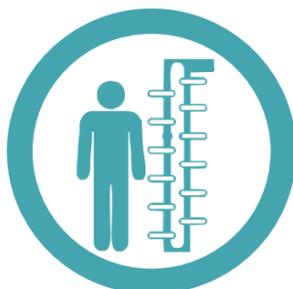

STAGGERED START TIMES

For companies and locations with high numbers of staff, students, etc wishing to keep foot traffic low and promote good social distancing, it's expected that staggered start times will be a simple part of the post-lockdown 'new normal'.

WORKPLACE SECURITY GATE CONTACTLESS ACCESS

Many security gates currently use pin code access via a keypad. Expect to see many of these pin code keypads being replaced by touch-free access options using RFID, NFC or Bluetooth enabled keyfobs, cards or smart phones.

OFFICE THERMAL DETECTION INTERCOM / ACCESS

The main entrance is, of course a 'funnel' for staff/visitor entry and so contactless intercom and access devices will be commonplace. Voice controlled-intercoms are now available to negate the need for high pedestrian traffic contact. In addition, contactless face recognition is now available as a highly secure access authentication option. And to enhance the COVID-secure credentials of your building, Intercom & Access units are now available with integrated thermal detection cameras to highlight (or even prevent) anyone with fever-like symptoms from entering the building.

LOBBY SOCIAL DISTANCING AUDIO MESSAGING

Many security gates currently use pin code access via a keypad. Expect to see many of these pin code keypads being replaced by touch-free access options using RFID, NFC or Bluetooth enabled keyfobs, cards or smart phones.

CUSTOMER VISIT QR CODE SCAN ACCESS

Access to buildings for visitors often requires the pressing of buttons to contact reception. Companies can now send temporary or limited-use QR codes to any visitors smart phone. When the visitor arrives at the entrance they simply scan the QR code into the intercom for immediate touch-free access to the building.

MEETING ROOM ENVIRONMENT CONTROL

Control the meeting room environment or AV systems using touch-free technologies. Lighting, temperature control, automatic blinds and huddle room technology are just some of the systems which can be controlled via automation apps or voice control via smart speakers, for instance.

LUNCH BREAK CONTACTLESS PAYMENT

As well as the obvious use of contactless payments, most high street retailers are now using 'sneeze screens' or 'cough barriers' at the till. Communication between retail staff and customer through these barriers can be greatly improved using touch-free speech transfer intercom systems.

VIDEO CONFERENCE / ZOOM MEETING

One of the most successful technologies almost everyone adopted during lockdown was, of course, video conferencing via platforms such as Zoom and Teams. Surely set to remain the 'flagship' of new-normal as we realise the benefits of remote meetings and remote working to reduce contact and prevent another pandemic spike.

JOURNEY HOME – INTERCOM PANEL VIDEO CALL

Late home or just catching up with the kids on the train? Make the most of your door intercom system by video calling the family from your smart phone to your door intercom answering panel.

ARRIVE HOME KEYLESS DOOR ENTRY

Keyless entry to your house is now a growing part of home automation. Use your Bluetooth-enabled smart phone to unlock the front door without the need for your keys.

AND RELAX!..

"Alexa - close the blinds and play my favourite track list!.."
